Dear Mr. Straga:

Certification of Modified Thermoid Superlite "V" Coaxial Hose

You requested certification of a modified version of the previously certified Superlite "V" Hi-Flo coaxial hose. The modifications consists of permanently printing the identification on the outer coupling, an increase in the length of the outer ferrule and elimination of the sleeve, an increase in the diameter of the outer (vapor) hose, and an increase in the wall thickness of the inner (product) hose.

As required by the Air Resources Board certification procedures, you requested the approval of the Division of Occupational Safety and Health, the Office of the State Fire Marshal and the Department of Food and Agriculture, Division of Measurement Standards. The necessary approvals have been obtained from these agencies.

I find that the Superlite "V" coaxial hoses, with the modifications described above, will not adversely affect Phase II vapor recovery systems on which they may be installed. Therefore, the modified Thermoid HBD Superlite "V" Hi-Flo coaxial hoses are certified for use with Phase II gasoline vapor recovery systems.

If you have any questions, please call Laura McKinney, Associate Air Pollution Specialist, at (916) 327-1525.

Sincerely,

James J. Morgester, Chief  
Compliance Division
